

1 Founder & Company Info

FOUNDER NAME	Adam Morgan
TITLE	Co-Founder & Chief Product Officer
COMPANY / PROJECT	Vektrum
PERPLEXITY EMAIL	⚠ [YOUR PERPLEXITY ACCOUNT EMAIL — fill in before submitting]
WEBSITE	https://vektrum.io
CONTACT	operations@vektrum.io
U.S.-BASED	✓ Yes — U.S.-based, eligible to attest

2 One-Liner — What Are You Building?

"Vektrum is the release-control layer for construction disbursements — enforcing 10 server-side conditions before any draw moves."

3 Product or Demo Link

Interactive 20-slide investor deck (PDF also available at /vektrum-pitch.pdf)

4 Two-Minute Demo Video

A dedicated demo video is in production. In the meantime, the interactive live demo at vektrum.io/demo-live/deal/harbor walks through the same story end-to-end — Harbor Draw #3, a real \$2.18M release:

- **Step 1:** Funder reviews the deal and milestone status
- **Step 2:** Perplexity AI draw brief completes — risk score 91/100, no critical flags
- **Step 3:** 10-condition gate evaluates all conditions simultaneously (all pass)
- **Step 4:** Funder triggers the release (not the admin, not the contractor)
- **Step 5:** Rail executes (Stripe Connect automated or external/manual)
- **Step 6:** Hash-chained audit row written; contractor notified

USAGE 1 AI Draw Control Brief — The Core Precondition

Perplexity `sonar-pro` is the first model in our fallback chain and powers the mandatory AI Draw Control Brief. For every release attempt, it reads the draw package and extracts: milestone completion %, lien waiver status, inspection sign-off, budget variance flags, and unresolved open items — then returns a structured risk score (0–100). If any critical risk flag is set, the release gate blocks automatically.

Harbor Draw #3 result: risk score 91/100 · no critical flags · gate clears in seconds vs. 2–3 day manual underwriter SLA

USAGE 2 Multi-Provider Fallback Chain — Operational Resilience

Perplexity `sonar-pro` is primary in a three-provider chain (`sonar-pro` → `claude-sonnet` → `gpt-4o`). When any single provider has downtime, the brief runs on the next. This removed an entire reliability engineering workstream — we did not need to build our own document-analysis NLP pipeline or manage model inference infrastructure.

Scope change: 3–4 months of NLP infrastructure work eliminated; shipped in days instead

USAGE 3 Made AI-Gated Release Commercially Feasible

Without Perplexity, every draw release would require a human underwriter to review the package before the gate could run — a 2–3 day SLA that would make Vektrum a bottleneck rather than an accelerator. `sonar-pro`'s document reading capability made the AI precondition fast enough to be a gate condition, not a separate workflow step. This is what makes Vektrum's model viable: the AI informs the gate; the gate is deterministic; the funder decides.

Product model only exists because AI review is fast enough to be a synchronous gate precondition

May 2026

Production-grade v1 shipped. Full 10-condition release gate, DocuSign contract signing (funder + contractor), Stripe Connect automated rail, external/manual execution rail with SLA tracking, AI draw review (Perplexity sonar-pro), hash-chained tamper-evident audit log, Partner API with scoped keys, and Schedule of Values with SOV-milestone linking.

Ongoing

Design-partner conversations active. Outreach to construction lenders, title companies, and fund managers via the design-partner program (live at vektrum.io/design-partners). First pilot funders targeted for Q3 2026.

Depth

100+ automated tests covering release gate (all 10 conditions), webhook idempotency, admin safety, demo-data isolation, route smoke, RLS regression, audit chain health, and security boundaries. The platform is pilot-ready now — no remaining blockers to live funder onboarding.

Team

Adam Morgan (Co-Founder & CPO) — 10+ years construction project management; self-built Vektrum's full technical stack. **Tanner Walstad** (Co-Founder & CCO) — institutional software sales, GTM. **Phillip Walstad** (Board Advisor) — co-founder of Canary Speech (healthcare AI).

**Massive, Underdone Market**

\$550B+ annual US construction starts. Every construction loan has a draw process. The release-control layer has seen near-zero software investment — draw governance still runs on email, PDFs, and spreadsheets.

**Rail-Agnostic = No Lock-In**

Vektrum sits before Stripe, title, escrow, bank treasury, or any execution rail. Lenders keep their existing payment infrastructure and add release enforcement — no rip-and-replace, minimal friction to adopt.

**Per-Release Fee on Loan Volume**

0.65–1.00% per release. A single construction lender with \$100M in active construction loans running draws twice per year = ~\$1.3M ARR per customer. High-frequency, high-margin on top of existing capital flows.

**Compliance + Audit Moat**

Hash-chained audit evidence and LP-reportable release records become a compliance requirement for institutional lenders. First mover becomes the standard, the way Stripe became the default for online payments.

**Network Effects via Partners**

Each lender brings multiple deals. Each deal brings contractors proven on the platform. Title and escrow partners embed Vektrum into their workflows — distribution compounds with every integration.

**No Comparable Competitor**

Others (Procore, BuilderTrend, lien-waiver apps) track and manage. None enforce a server-side gate that is AI-informed, admin-proof, rail-agnostic, and hash-chained. Vektrum owns a category that does not yet have a winner.

Next 90 Days

- Close 1–2 paid pilot lenders — convert active design-partner conversations to live deal flow, first revenue milestone
- Hire GTM lead with institutional lending / fintech-infrastructure sales background to run lender outreach full-time
- Launch Partner API ecosystem — integrate the first title, escrow, or treasury partner using the Partner API already built and tested

Year 1

- 10+ active lenders with live draw flow generating recurring per-release fee revenue
- 3–5 title, escrow, treasury, and banking integrations distributing Vektrum into partner deal rooms
- SOC 2 Type I certification — controls are already operational; audit formalizes what's built
- Expand to commercial construction lenders and credit fund managers requiring LP-grade audit evidence
