

Unauthorized draws don't get released.

Vektrum verifies **every release condition** before a construction draw is authorized — so capital moves only when it's supposed to.

- Deterministic gate
- Non-custodial
- Runs on your existing rails

RELEASE GATE · MILESTONE 3

AI BRIEF
COMPLETE

\$420,000 draw requested

- ✓ Milestone approved by funder
- ✓ Signed contract on file
- ✓ Funding confirmed · no open change orders
- ✗ Conditional lien waiver — not on file

RELEASE BLOCKED

1 of 10 conditions failed
logged to audit

Approvals get tracked. Releases don't get enforced. **That gap — between a signed approval and a live wire — is where draw fraud, mechanic's liens, and frozen facilities happen.**

THE GATE

One gate. Ten conditions. No exceptions.

AI informs. The gate decides. The funder authorizes. No one overrides it.

ALL TEN MUST PASS — ENFORCED IN THE UI, THE API, AND THE DATABASE

- | | |
|---|---|
| 01 Milestone approved by the funder | 06 No existing active release (no duplicates) |
| 02 Milestone protection cleared for release | 07 No unresolved change orders |
| 03 Sufficient funded balance | 08 Signed contract on file |
| 04 Payout account verified (where required) | 09 Sequential-release prerequisites met |
| 05 Contractor onboarding complete | 10 Approved conditional lien waiver on file |

WHY WORKFLOW SOFTWARE CAN'T DO THIS

PROJECT & WORKFLOW TOOLS

They track the approval. They can't stop the release.

Tasks, documents, and sign-offs live here. But the disbursement itself stays a manual, discretionary decision — nothing enforces the conditions.

VEKTRUM · THE ENFORCEMENT LAYER

Approval is not authorization.

The release is **blocked in the UI, the API, and the database** until all ten conditions pass. No admin, contractor, or partner can move money early.

✓ Deterministic

Server-side gate. No UI, admin, or partner bypass.

📁 Non-custodial

Your rail moves the money — never Vektrum.

🔒 Tamper-evident

Every decision hash-chained into an append-only ledger.

🔗 Two rails

Stripe Connect, or your bank, title, or escrow partner.

Credit is tighter and draw-fraud losses are rising. Lenders are moving from trust-based draws to verified release control — before they wire, not after.

Contractors always free. Funders pay 1% per authorized release — **\$0 until funds move.**

Vektrum is authorization infrastructure — not a bank, lender, escrow company, or money transmitter.
Vektrum does not hold or custody funds. Stripe Connect is one supported rail, not required.
