

VEKTRUM

The Release Gate for Construction Capital

Programmable escrow with a 10-condition server-side release gate.

Vektrum is the trust infrastructure between funders and contractors — automating draws without compromising compliance.

\$1.8T

US construction lending

10

Server-side release conditions

45 → 2

Days per draw cycle

— THE PROBLEM

Construction finance has a trust problem.

The \$1.8T construction lending market runs on manual processes, misaligned incentives, and zero enforcement infrastructure.

\$13B+

lost annually to draw fraud

No enforcement layer

Draw requests move through email threads and PDFs. Anyone can request a release — there is no programmatic gate.

45 days

average draw cycle time

Broken process

Funders, inspectors, and title companies pass documents in circles with no shared source of truth.

0%

immutable audit trail in legacy tools

Zero accountability

When disputes arise there is no record of approvals, conditions, or capital flows. Litigation outcomes are uncertain.

— THE SOLUTION

Programmable escrow, not another dashboard.

Vektrum places a programmable release gate between funder capital and contractor payouts. Every condition is enforced server-side — not in the UI, not in a PDF, not in someone's inbox.

- ✓ Conditions enforced in the database layer — cannot be bypassed
- ✓ AI draw review with multi-provider fallback chain
- ✓ Hash-chained append-only audit log with tamper detection
- ✓ Native Stripe Connect payouts — no ACH delays
- ✓ DocuSign contract required before first milestone release
- ✓ Admin override requires AAL2 MFA + justification + audit trail

THE RELEASE GATE

10 conditions. Zero exceptions.

Every fund release passes all 10 checks atomically in a single server-side transaction. There is no UI path around this gate — it lives in the database layer, not the application layer.

AI PRECONDITION

Runs BEFORE the gate. Multi-provider chain: Perplexity → Anthropic → OpenAI. Malformed responses default to risk_level: critical.

All releases produce an append-only, hash-chained audit log entry. Modification triggers SQLSTATE 23001 at the DB level.

- 01

Milestone approved
Funder has explicitly approved the milestone

✓
- 02

Protection ready
protection_status = ready_for_release

✓
- 03

Sufficient balance
Escrow holds enough capital to cover release

✓
- 04

Stripe payouts enabled
Contractor can receive Connect transfers

✓
- 05

Onboarding complete
Contractor KYC / AML checks have passed

✓
- 06

No existing release
Idempotency guard — prevents double-release

✓
- 07

No open change orders
All change orders resolved before release

✓
- 08

Signed contract
DocuSign envelope fully executed

✓
- 09

Sequential ordering
Prior milestones cleared — prereqs enforced

✓
- 10

Approved lien waiver
Conditional lien waiver on file

✓

COMPETITIVE LANDSCAPE

The infrastructure gap no one else has closed.

Competitors offer dashboards and workflows. Vektrum is the only platform with server-side enforcement — the difference between a guardrail and a gate.

CAPABILITY	VEKTRUM	BUILT TECH	PROCORE	BANKS	MANUAL
Automated release gate	✓	✗	✗	✗	✗
Server-side enforcement	✓	✗	✗	✗	✗
AI-assisted draw review	✓	✗	✗	✗	✗
Native Stripe payouts	✓	—	✗	✗	✗
Hash-chained audit log	✓	✗	—	✗	✗
Dispute resolution engine	✓	—	—	✗	✗
DocuSign gate enforcement	✓	✗	—	✗	✗
Real-time ops monitoring	✓	—	✗	✗	✗

✓ Full support — Partial / limited ✗ Not supported

MARKET OPPORTUNITY

\$1.8T market. Zero infrastructure.

Construction lending is one of the largest and least-digitised credit markets in the US. The enforcement layer has seen zero investment — until now.

TAM

\$1.8T

Annual US construction starts — all draw-financed

SAM

\$420B

Draw management in CRE + residential with digital tooling

SOM

\$2.4B

3-year target — mid-market lenders + high-vol contractors

8.2% CAGR

Construction lending growth through 2030

\$13B DRAW FRAUD

Estimated annual US loss in disbursement

180K+ GCS

US general contractors in the SAM segment

2,300+ LENDERS

Community banks doing construction draws

BUSINESS MODEL

Take rate on capital at rest.

Revenue compounds with deal volume. As lenders run more draws through the gate, platform revenue scales with capital flow — not headcount.

Transaction fee

PRIMARY

15–25 bps per released draw
\$850K draw → \$1,275–\$2,125 per release event

Platform fee

RECURRING

\$500–\$2,000 / month per lender
Seat-based ops dashboard + admin tooling + API access

Enterprise API

EXPANSION

Custom contract, usage-based
White-label release gate for lender origination systems

UNIT ECONOMICS

Per deal, annualised

Avg deal size	\$850K
Avg draws / deal	10
Revenue / draw	~\$170
Revenue / deal / yr	~\$1,700
Gross margin	~88%
CAC (est.)	\$2,800
Payback period	~19 mo
