

Unauthorized draws don't get released.

Every release condition is verified before a draw is authorized.

- Deterministic gate
- Non-custodial
- Runs on your existing rails

RELEASE GATE · MILESTONE 3

AI BRIEF
COMPLETE

\$420,000 draw requested

- ✓ Milestone approved by funder
- ✓ Signed contract on file
- ✓ Funding confirmed · no open change orders
- ✗ Conditional lien waiver — not on file

RELEASE BLOCKED

1 of 10 conditions failed
logged to audit

Approvals get tracked. Releases don't. **That gap is where fraud, liens, and frozen capital live.**

THE LIFECYCLE OF A DRAW

Approval isn't authorization. The gate is.

THE GATE CHECKS 10 SERVER-SIDE CONDITIONS — ENFORCED IN UI · API · DATABASE

- | | |
|-------------------------------------|---|
| 01 Milestone approved by the funder | 06 No existing active release (no duplicates) |
| 02 Milestone protection cleared | 07 No unresolved change orders |
| 03 Sufficient funded balance | 08 Signed contract on file |
| 04 Payout account verified | 09 Sequential-release prerequisites met |
| 05 Contractor onboarding complete | 10 Approved conditional lien waiver |

Deterministic

Server-side gate. No bypass.

Non-custodial

Your rail moves the money, never Vektrum.

Tamper-evident

Hash-chained, append-only ledger.

Two rails

Stripe, or your bank / title / escrow.

Lenders are moving from **trust-based draws** to **verified release control** — before the wire, not after.

Contractors always free. Funders pay 1% per authorized release — **\$0 until funds move.**

Vektrum is authorization infrastructure — not a bank, lender, escrow company, or money transmitter.
Vektrum does not hold or custody funds. Stripe Connect is one supported rail, not required.
