

Workflow tools track work. Vektrum governs release.

Conditional authorization infrastructure for construction disbursements. Vektrum verifies release conditions, authorizes or blocks the draw, and records tamper-evident proof — then signals your chosen rail to pay. Funds release only when every condition is verified.

10-condition release gate

AI-assisted draw review

Two execution rails

Hash-chained audit

Non-custodial

THE RELEASE PATH — COMPLETION TO AUTHORIZATION

01

Project completion

A milestone or SOV line is reported complete on site.

02

Evidence collection

Documents, photos, inspections, lien waivers, and approvals attach to the draw.

03

AI Draw Control Brief

A required pre-review surfaces gaps and dispute risk before the gate runs.

AI INFORMS • THE GATE DECIDES

04

Deterministic release gate

10 server-side conditions evaluate in one pass. Any failure blocks release.

10 CONDITIONS • ENFORCED IN UI • API • DATABASE

05

Authorization

The funder authorizes only after every condition passes. No admin or UI override.

06

Payment authorization

Vektrum signals the selected rail to execute — it never moves the funds itself.

07

Immutable audit trail

Actor, timestamp, proof, and decision are written to an append-only ledger.

HASH-CHAINED • APPEND-ONLY

WHY IT HOLDS — AND WHY IT'S HARD TO REPLACE

Deterministic gate

10 server-side conditions. No admin, contractor, or UI can bypass the gate.

Non-custodial

Vektrum never holds funds. Runs on Stripe Connect or your bank, title, or escrow rail.

Tamper-evident proof

Every decision is hash-chained into an append-only, verifiable audit trail.

Dispute isolation

A disputed milestone freezes alone. The rest of the project keeps flowing.

WORKFLOW & PROJECT-MANAGEMENT TOOLS

Track work. Store documents.

They route approvals and hold files. But release stays a manual, discretionary email — nothing enforces the money.

VEKTRUM • THE ENFORCEMENT LAYER

Governs release.

Payment is blocked until every condition passes — enforced in the UI, the API, and the database. Approval alone is never enough.

WHO USES IT

Construction & bridge lenders

Private funders

Title, escrow & fund control

Banks & credit funds

Builders & GCs

Developers & owner reps

WHY NOW

Tighter construction credit and rising dispute losses are pushing lenders from **trust-based draws to verifiable, auditable release control**. The payment rails already exist. The governance layer between approval and money didn't — until now.

Governed release, on your existing rails.

Contractors always free. Funders pay 1% per authorized release — \$0 until funds move.

Vektrum is authorization infrastructure — not a bank, lender, escrow company, or money transmitter. Vektrum does not hold or custody funds. Stripe Connect is one supported rail, not required.
